Field Season Highlights

Demographic studies
Michelle DePrenger-Levin

DENVER BOTANIC GARDENS
Sclerocactus glaucus
Astragalus microcymbus
Graph showing the average rosettes per transect for two sites, Garden Park East and Garden Park West, over a period of years. The x-axis represents the survey year, and the y-axis represents the average rosettes per transect. The graph indicates variability in the number of rosettes per transect over time with error bars indicating variability in the data. Additionally, there is another graph showing annual precipitation of the previous 12 months with a shaded area indicating a significant event, labeled as 448mm.
